PRD-LITE

Real Passport & Community Boards

PROBLEM

Users often post once and lose any reason to reopen BeReal — the feed goes quiet after the morning post, and the one-photo format can start to feel repetitive with no sense of shared occasion.

TARGET USER

Socially active BeReal users (e.g. college students, young professionals) who want a lightweight, opt-in reason to reconnect with their friend group throughout the day — without added pressure or competition.

MAU SUCCESS METRICS

Primary: Daily open rate (average sessions per user per day)

Secondary: % of daily posts tagged to a board; Passport / Leaderboard visit frequency; D30 retention

ASSUMPTIONS & NON-GOALS

Assumptions:

- Users will enjoy an opt-in, lightweight community ritual without feeling pressured.
- A daily theme reset creates enough curiosity to justify a return visit.
- Enough friends will opt in for a capsule to feel alive (critical mass).

Non-Goals:

- No sponsor / ad-serving logic in MVP (data model support only).
- No public, cross-friend-group leaderboard.
- No changes to the core once-daily notification or capture mechanic.

USER STORIES

- As a BeReal user, I want to see today's theme prompt when I open the app, so that I have a reason to check in and something fresh to think about.
- As a BeReal user, I want to optionally tag my daily photo to a themed board, so that I can share it with friends who are also joining in — without being forced to.
- As a BeReal user, I want to browse the shared board and see my friends' tagged photos, vote, and comment, so that I feel connected to what my friend group is doing today.
- As a BeReal user, I want to turn off theme prompts and board tagging anytime, so that I stay in control of my experience.

ACCEPTANCE CRITERIA

- Today's theme unlocks automatically at 12:00am in the user's local timezone and is visible on the home screen.
- At capture, the user chooses “Theme Post” (tag to one active board) or “Random Post” (default, untagged) — never auto opted-in.
- A tagged post appears in that board's shared capsule, visible only to friends who have also opted in, and can be hearted and commented on.
- User can view a personal Passport screen (stamps earned) and a friend-group leaderboard — both ship in the Phase 1 MVP, not deferred.
- Theme notifications can be disabled anytime from Settings without losing the ability to post randomly.
- The tagged photo is identical to a standard BeReal post — no filters, retakes, or new content requirements.

GUARDRAILS (BEREAL BRAND FIT)

- Authenticity — the underlying photo never changes; tagging is a layer on top, not a new content requirement.
- Privacy — boards/capsules are visible only to opted-in friends within the existing friend graph; no public leaderboard.
- Simplicity — adds one toggle to the existing capture flow; no new navigation paradigm.
- Positive Behavior — stamps and the leaderboard reward participation without shame-based or loss-framed messaging.
